EVALUERVE

Project Management

BASIC LEVEL

What is Project

A project is a temporary endeavor undertaken to create a unique product, service or result. The temporary nature of projects indicated that a project has a definite beginning and an end.

Timeline

Project has a fixed timeline with definite start end points

Resources

Project has defined and limited resources

Tools

Special tools and techniques are used for project management

Team

Project needs a diverse team stretching across departments and functions

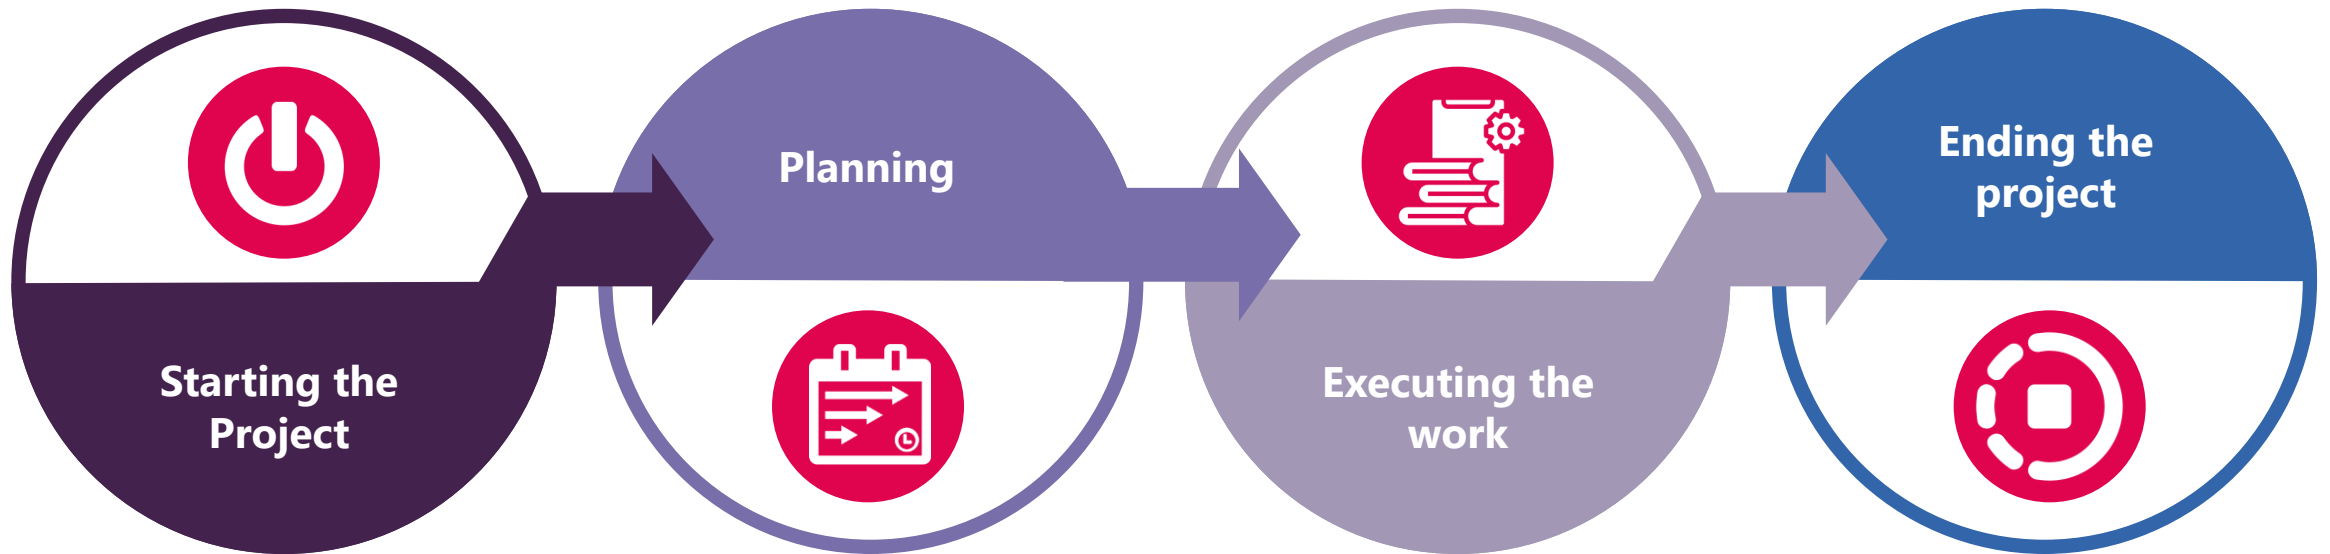

What is Project Management

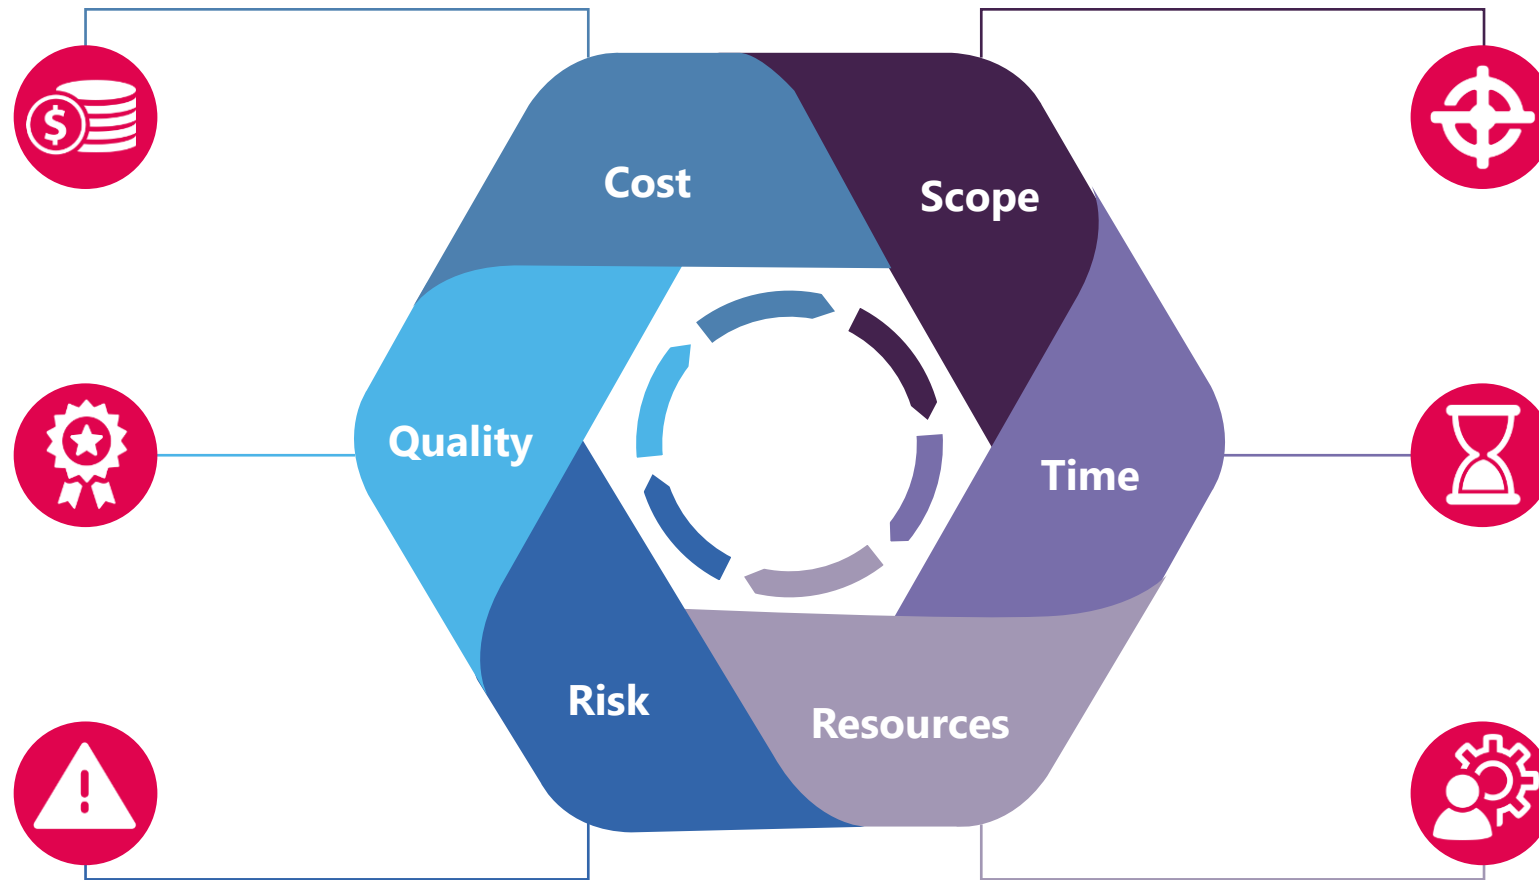

Application of **processes, method, knowledge, skills** and **experience** to achieve objectives of unique project is known as project management

Project Life Cycle

Project's Competing Factors (Constraints)

Project Management Process Group

Initiation

Checking the feasibility and measuring the worth

Planning

Making blueprint to achieve the project's objective

Monitor & Control

Monitors and controls the working of the project to ensure project is going as per schedule

Execution

Allocation of resources and making the deliverables

Closing

Last stage where everything what went well and what went wrong all through process is summed up

WBS (Work Breakdown Structure)

- **Hierarchical decomposition of total scope of work** (“inverted tree” structure)
- Deliverable/ phase-oriented grouping of project components
- Used to develop or confirm common understanding of project scope.
- Work package helps in:
 - Creating schedule, cost estimation better
 - Better monitoring and controlling
 - Information/data dissemination & aggregation
 - Coding & attaching various attributes to work packages

A woman with long brown hair, wearing a black and white striped shirt, is smiling and pointing her right index finger towards a whiteboard. The whiteboard displays a project network diagram with various nodes and connecting lines. The background is a blurred office setting. The image is overlaid with a geometric pattern of white lines forming triangles on a dark purple background.

Critical Path Method (CPM)

Critical Path Method (CPM)

- **It's the sequence of scheduled activities that determines the duration of the project.**
 - The path with longest duration.
 - Identifies dependencies between tasks, and shows which tasks are critical to a project.

Creating Schedule Network diagram

Activity	Duration (Days)	Predecessor (s)
A	3	None
B	2	A
C	5	A
D	4	A
E	3	B,C,D
F	6	E
G	5	E
H	3	F,G

Coverage – Advanced Level

Cost Planning

- Cost Estimating Tools
- Earned Value Method (EVM)

Managing Risks

- Project Risk
- Scale & impact
- Probability & Impact Matrix
- Risk responses
- Risk Register

Managing Project Changes and Closure

- Managing Changes
- Project closure
